

## Lighting description for Avner the Eccentric in Exceptions to Gravity

The show needs:

- A bright wash from the front across the full stage
- Blue back light
- Magenta high side light, preferably from the ends of the first and second electrics
- House light control from the light board

There is one special area, about 2m x 2m, or 6' x 6', in the center of the carpet. It is like the full stage look, only smaller, and can be part of the full stage plot.

The light plot on my website will give the specifics of channels, color, and hanging position of the lights, But please feel free to adapt a rep plot, or the lights available in your theater.

Our technical director will be in contact with each theater ahead of time so that there are no surprises.

A couple of notes:

- Avner wears a brimmed hat, so the front light

should be at a low enough angle, i.e. Far enough from the front of the stage to light under the brim.

- The blue back lights are true back lights, and not top lights. They serve to illuminate the objects that Avner juggles and balances during the show.

If you have any questions or concerns, please 207-807-6100, or email, [avnerecc@gmail.com](mailto:avnerecc@gmail.com).
